

The birth of soapstone

Over two billion years ago, the Earth was still in its infancy and the continental plates were in motion, seeking their current positions. Even the Northern regions, now so tranquil, were home to high levels of volcanic activity.

A major collision between the continental plates occurred in the area of what is now Finland's eastern border. The solid surface layer of the Earth's crust buckled in places, creating a mountain range over nine kilometres high. Underneath, "air pockets" filled with a molten stone mass, which compressed into an extremely dense material. Thus soapstone obtained its unique heat and cold storage characteristics.

However, the stone lay dormant in the bowels of the Earth for billions of years, until a new, colossal force of nature, the ice age, ground away the mountain range. This unique material was thereby laid bare for our use.

Carelian Soapstone

Carelian soapstone is relatively soft stone material, that can be crafted to various shapes and forms by experienced craftsmen.

QUALITY THAT YOU CAN TRUST

Hukka Design

Design inspired by Finnish Nature

Hukka Design is a small family firm based in Tuupovaara, eastern Finland. We will soon have been producing soapstone implements and decorative objects for 40 years. Because we want our products to bring pleasure and joy to your life, we design them with care and make them from the best materials. HUKKA, quality that you can trust!

DESIGN[®]
FROM
FINLAND

Design

“Green forests, blue lakes and mythical silence, even the occasional howl of a wolf, are the sources of our inspiration.”

Soapstone is a mystical material which does not bend easily to the craftsman's will. Since we aim to respect its unique nature, many of our product ideas and their visual appearance are inspired by nature. Those responsible for the design and manufacture of our products can often be found spending time in the forests and lakes of North Karelia.

Features

Soapstone has a mystical ability to withstand the rigours of the Arctic environment. It endures both fiery heat and freezing frost. Owing to its density, it can store heat and cold uniquely well. Most HUKKA products are based on these qualities. The stone is therefore highly dense, giving off neither odours nor tastes. This has enabled it to be tested and approved for use even with foods.

SAUNAJÖY

A massage stone with one textured side, perfect for exfoliating skin in the sauna.

ø 57 x 60

16034

SOLEJÖY

A foot massager that combines relaxing massage and heat

stoneballs 2 pcs Ø 45 +
cork base 250 x 108 x 20 mm

16030

MINISOLEJÖY

A smaller version of the Solejoy, ideal for targeted foot massages and easy portability.

ball ø 45 mm, cork 100 x 20 mm

16037
